

EXP NO 22: Create a SQL storage service and perform a basic query using any Public Cloud Service Provider (Azure/GCP/AWS) to demonstrate Database as a Service (DaaS) using Azure.

AIM:

Create a SQL storage service and perform a basic query using any Public Cloud Service Provider (Azure/GCP/AWS) to demonstrate Database as a Service (DaaS) using Azure.

Procedure:

Procedure:

1. Log in to Azure Portal.
2. Create a SQL Database → Select Use existing data → Sample (AdventureWorksLT).
3. Open Query Editor → Sign in with credentials.
4. Run the SQL query to join tables SalesLT.ProductCategory and SalesLT.Product.
5. View the result showing product categories and product names.

Design:

Resource group - A container that holds related resources for an Azure solution. The resource group can include all the resources for the solution, or only those resources that you want to manage as a group. You decide how you want to allocate resources to resource groups based on what makes the most sense for your organization. [Learn more](#)

Microsoft Azure portal showing Marketplace. The page displays a search for 'database' with filters for Pricing, Operating System, Publisher Type, and Product Type. A notification banner indicates that Private Offers are now available.

Search results for 'database' include:

- Oracle Database 19c
- Oracle Database 12c
- Azure Database for MySQL
- Azure Database for MariaDB

Notification: Private Offers are now here. Private Offers have moved. To see your private offers, go to Private Offer management on the left menu.

Overview Plans Usage Information + Support Ratings + Reviews

SQL Database is a cloud database service built for application developers that lets you scale on-the-fly without downtime and efficiently deliver your applications. Built-in advisors quickly learn your application's unique characteristics and dynamically adapt to maximize performance, reliability, and data protection.
